

# COMFORT *plush*™

OUTDOOR SEATING SYSTEM

Lloyd/Flanders® Comfort Plush™ outdoor seating system redefines outdoor seating comfort. Our premium cushions feature exceptional seating comfort and resilience, inherently mildew/bacteria resistant components, and the security of knowing that our Comfort Plush™ seating system is an environmentally friendly product.

Lloyd/Flanders® Comfort Plush™ cushions are made using the trademark BioComfort® 1.8 density High Resilience California Fire Rated Foam. BioComfort® is formulated to include soy based products, which reduces the amount of petroleum based chemicals used in production.

Our BioComfort® foam is wrapped with 100% polyester fiber, a combination meeting the requirements of California's Technical Bulletin #117. Bonded to this foam and fiber wrapped core is a 100% polypropylene jacket completely encompassing the entire cushion core. The jacket is composed of two layers of spun bond fabric which sandwich an inner layer of meltblown fabric, hence the name SMS (spun bond+meltblown+spun bond). Meltblown material is hydrophobic, which means to literally "shed water".

Lloyd/Flanders® new Comfort Plush™ Outdoor Seating System will provide years of comfort and pride of ownership.
